Project Abstract Submission Form

Sec No- 2	Team No- 5	Project Title-Inventory & Warehouse Management System
------------------	-------------------	--

1. Abstract : The Inventory & Warehouse Management System is a software system developed to manage products and stock in a warehouse efficiently. In many businesses, inventory details are maintained manually, which can be time-consuming and may cause errors in stock counting, product records, and tracking of incoming and outgoing items.

The proposed system provides a simple and organized solution for managing inventory. It allows users to add, update, delete, and view product details and keep track of available stock. It also helps record products received into the warehouse and products issued from the warehouse. All important information is stored in a database, making it easier to access and manage records.

The main aim of this project is to reduce manual work, minimize errors, save time, and maintain accurate inventory records. The system helps users quickly check product availability and manage warehouse operations in a more organized manner.

Overall, the project provides a simple and user-friendly solution for inventory and warehouse management.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030241	K.Sai Teja	
2520030292	P.Revanth	

3. Frameworks / Platforms / Software Used :

Frontend: React.js

Backend: Node.js and Express.js

Database: MySQL

Database Management Tool: MySQL Workbench

API Integration: REST API

Development Environment: Visual Studio Code

Version Control: Git and GitHub

Guide Name and Signature (remarks if any) _____
